

Task 1 – Web Application QA Bug Report

Automation & QA Developer Take-Home Assessment

Demo Application: UPEX Dojo

Bug Report Table

	Title / Summary	Steps to Reproduce	Expected vs Actual	Severity	Suspected Cause
1	Task description cannot be completely cleared once populated	1. Open an existing task containing a description. 2. Edit the task and delete all description text. 3. Click Save . 4. Refresh the page.	Expected: The description should become empty and remain empty after refresh. Actual: The previous description reappears after saving and refreshing.	Medium	The update logic may treat an empty description as an unchanged or missing value instead of saving an empty string.
2	Tasks cannot be re-ordered within the same status column	1. Open the task board. 2. Drag a task vertically within the same column, such as Backlog or In Progress. 3. Drop it above or below another task. 4. Refresh the page.	Expected: Tasks should change their order and the new order should persist. Actual: The task cannot be moved to a different position within the same column.	Low	Same-column drag-and-drop or index-update logic may not be implemented correctly.
3	Unbroken 100-character task titles overflow the card UI	1. Create a task with a 100-character title containing no spaces. 2. Save the task. 3. View the task on the dashboard.	Expected: The title should remain within the task-card boundaries by wrapping or truncating appropriately. Actual: A continuous title can overflow outside the normal card layout.	Medium	The title element may be missing appropriate word-breaking, wrapping, or width constraints.

4	Long unbroken titles make the three-dot action menu inaccessible	1. Create a task with a long continuous title without spaces. 2. View the task card. 3. Try to locate and access the three-dot (⋯) menu on the task card.	Expected: The three-dot menu should remain fully visible and accessible, allowing users to edit or delete the task. Actual: When the task title contains a long unbroken string, the text overflows beyond the card boundaries, causing the three-dot menu to become invisible and preventing users from accessing the Edit and Delete options.	High	The task title does not properly handle long unbroken text or reserve sufficient space for the action menu, causing the overflowing text to interfere with the menu area.
5	No visible guidance for the task title character limit	1. Open Create New Task. 2. Enter or paste a title approaching or exceeding the supported limit. 3. Observe the title field and any validation feedback.	Expected: The UI should clearly communicate the supported title limit through helper text, a character counter, or validation feedback. Actual: No visible indication of the title character limit is provided to the user.	Low	The title input does not provide user-facing character-limit guidance or validation feedback.

Root-Cause Analysis

The application supports task titles up to 100 characters, but continuous text without spaces can cause the title to extend beyond the normal task-card layout. The title is treated as an unbroken text sequence, so the browser cannot naturally wrap it at spaces. As a result, the title can overflow the available width of the card. This overflow can interfere with the area reserved for the three-dot action menu. When the menu becomes inaccessible, users may be unable to access important actions such as Edit and Delete. The issue is more noticeable with titles containing numbers or other continuous characters without spaces. The title component should apply appropriate word-breaking or wrapping rules and reserve sufficient space for the action controls. This would keep the card layout stable while still supporting the permitted title length.

Bug 4: Long Unbroken Titles Make the Three-Dot Action Menu Inaccessible

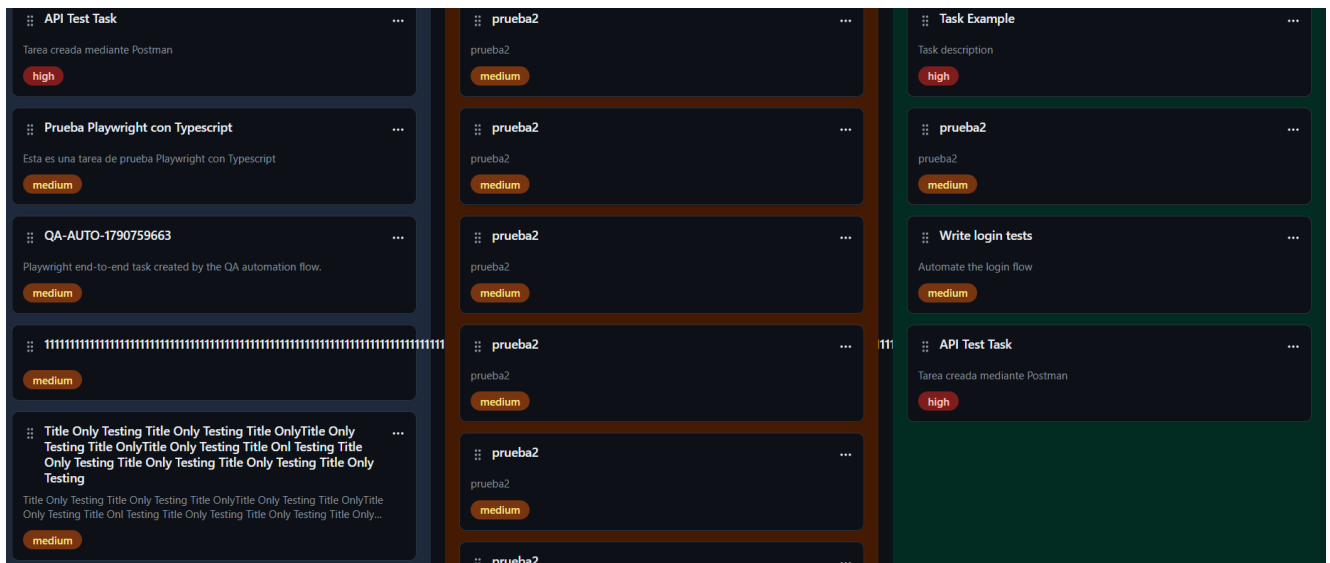

Figure 1: Long unbroken title overflowing the task card.

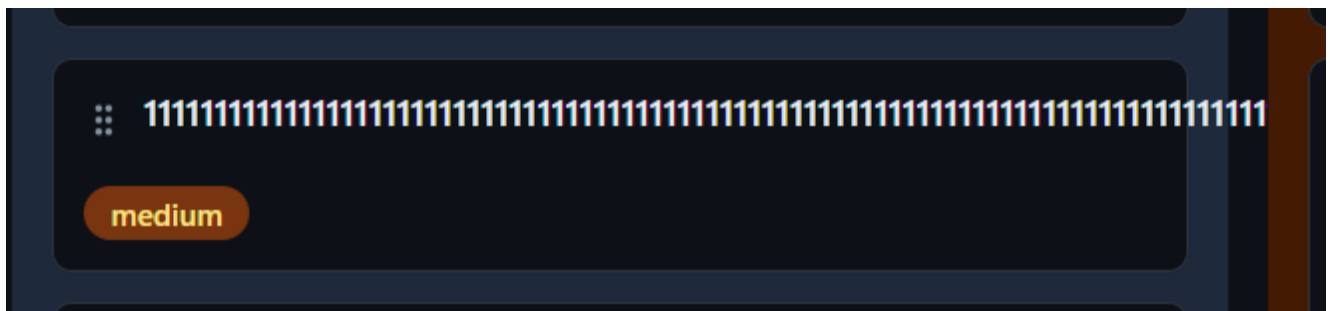

Figure 2: Three-dot action menu is not visible due to title overflow.
